

Matt Cook

Kansas City, MO matt@studiosapiens.io

Education

MBA, Data Analytics and Business Intelligence (4.0 GPA)

July 2019

- Lucas Sterne & Albert G. Spaeth Graduate Business Scholarship
- Graduate Student Achievement Award

BM, Jazz/Commercial Music

May 2017

- UCM Music Dept. "Outstanding Senior" Award

Skills + Strengths

Strengths: Software Architecture, CI/CD and Dev-Ops, UX Awareness, Manual and Automated Testing, Practical knowledge of AI (both usage/prompting, and implementing app features using AI services), Asking Questions, Pragmatism, Kindness, Enthusiasm

Languages, Tools, Frameworks: Full-Stack Typescript + Javascript, Neovim, React, GraphQL, Vue, Svelte, Next.js, Nest.js, Material UI, Tailwind, Docker, PostgreSQL, AWS, Gulp, Express, Sass, CSS, Golang, Python, and more

Professional Experience

Lead Software Engineer, Brightway Insurance

August 2024 - Present

Co-Founder & CTO, Hively

October 2021 - Present

- Designed and built core application infrastructure while establishing strong security standards, and employing automated deployment/scaling/testing.
- Designed and optimized PostgreSQL database for various application needs
- Led a small, diverse team of full/part-time developers, moonlighters, and founders, fostering a collaborative and innovative environment.
- Built a robust, flexible, maintainable, multi-tenant solution from the ground up using Typescript, Node, and React, including:
 - The ability for partners to white-label the entire solution
 - Event-based request and notification infrastructure, serving various needs of clients and their residents
 - Calendar, event, attendee and organizer management
 - Cross-tenant administrative features for feature/subscription management and troubleshooting
 - Payments and invoicing infrastructure via in-app Stripe integration, both for customer subscriptions and to facilitate payments from residents to client organizations

- Space and resource management, including ability to set prices/time constraints, and allow requests from the public, while gathering necessary information from requesters via request questions
- Athletics program management, registration, question-driven forms, and ai-driven auto-scheduling of leagues
- Public portal for users to enroll in athletics programs and track their events
- Automated E2E testing
- CI/CD pipeline for safe and lightning fast release cycle
- A customer facing API for critical functions of the app
- Enabled various data migrations (spaces, events, resources) from an existing enterprise platform supporting hundreds of universities and university systems into our new platform via a partner API
- Served as a liaison to company partners, defining integration requirements and strategies, coordinating and balancing many priorities, requirements, and interests of stakeholders.
- Participate in core business development discussions - partnerships, roadmap, strategy, marketing.
- Provide direct support to both customers, their residents, and our company partners/integrations

Software Engineer III, EquipmentShare

July – October 2021

- Implemented automated testing infrastructure to increase platform stability for mission-critical regulatory truck driver log application.
- Expanded and maintained GraphQL API supporting web and mobile applications.

Software Engineer, RFP360

April – July 2021

- Member of product escalations team, triaging and resolving issues that need code changes on a platform utilizing Spring, AWS EKS, and React.

Software Engineer, Ad Astra

November 2018 – April 2021

- Heavily utilized various AWS services while building out Ad Astra's next-generation platform - Lambda, SNS, SQS, Athena/Glue, DynamoDB, ECS, CloudTrail, CloudWatch, Cognito, IAM, and others, as well as CDK for IaC
- Led a cross-team effort to decouple microservices, and improve dynamic discovery of serverless AWS microservices and queues.
- Elected to represent 2 separate teams, discussing organizational/architectural concerns, and gathering/sharing information as necessary to support a distributed system
- Advocated for use of new services and tools to advance/improve our architecture and infrastructure
- Received a development department peer-to-peer award, for being kind, and making myself available to help, advise, and mentor any time I am needed
- Founding member of Security Task Force – 4-man group that helped research and refine organizational security standards, as well as vet training materials for developers.

Team Lead, Kansas City Pet Project

August 2017 - May 2018

- Worked with a team of ~4 to take care of basic needs (food, water, cleaning, health observation, and mental stimulation/enrichment) for 100-150 dogs on any given day with limited resources and severely aging infrastructure

- Counseled potential adopters on animal care, health history, and behavior
- Led a team at the retail location, caring for both dogs and cats, adoption counseling, medications, inventory management, etc.

Volunteer Experience

OSS Developer, Code For America (KCMO)

August – December 2019

- Led several self-taught, aspiring developers and worked with external stakeholders to gather requirements, identify MVP, and ship a very simple open source calculator that helps citizens better understand the Kansas City Kansas Neighborhood Revitalization Act and their personal benefit.

Tech Coach, KC Public Library / LaunchCode

April 2019

- Helped patrons at the Kansas City Public Library understand and operate library technology, write resumes, etc.

Recognition and Awards

- Cloud Security Alliance Certificate of Cloud Security Knowledge (CCSK)
- 1st Prize - American Jazz Museum Composition Contest
- All-State and All-Collegiate Jazz Ensembles
